

FEN UI Screen Design Spec

Visual and UX source of truth for how FEN should look and feel in the MVP.

Brand Intent

- FEN should feel calm, readable, welcoming, and practical.
- It must not feel like a freelance marketplace, crypto app, or trendy gig platform.
- The interface should always favour clarity over cleverness.
- The user should feel that posting a job or finding help is quick and obvious.

Visual Style Rules

- Primary colour family: violet / purple.
- Dark mode is included in MVP.
- Use strong contrast for text and buttons.
- Use large readable headings and body text.
- Cards should have generous spacing and not feel cramped.
- Avoid clutter, tiny icons, or small low-contrast helper text.

Suggested Colour Tokens

- Background: #0E0A14
- Card: #171024
- Border: #231A33
- Text: #E7D9FF
- Muted text: #CBB8F1
- Accent: #B56CFF
- Notice background: #20172E
- Notice border: #5B3A87
- Badge background: #2A1E3D
- Badge border: #6E46A3

Typography Rules

- Use a clean sans-serif font style throughout.
- Headings should be bold and clear.
- Body text should never feel small or compressed.
- Minimum comfortable mobile body size should feel around 16px equivalent.
- Buttons should use plain, direct labels.

Copy and Tone Rules

- Use plain English.
- Prefer words like Post a job, Find work, Message, Complete, Cancel.
- Avoid words like gig, hustle, marketplace, bid, escrow.
- Text should sound helpful, not corporate or technical.
- Warnings should be clear and calm, not aggressive.

Screen 1 — Splash / Intro

- Show FEN logo or wordmark centered.
- Show subtitle: Fast Earn Nearby.
- Short line underneath: Local help, when you need it.
- Background should be simple and dark with violet accent.
- No clutter or long paragraphs.

Screen 2 — Sign In / Sign Up

- Very simple layout: title, short explanation, email field, password field, primary action button.
- Clear alternate action between Sign In and Register.
- Forgot password visible but not distracting.
- Verification banner should be plain and easy to understand.
- This screen must feel safe and familiar.

Screen 3 — Browse

- Top area: simple page title and optional search.
- Below: filter chips for urgency, distance, and category.
- Main area: job cards list.
- Job cards should show title, budget, urgency, postcode area, and approximate distance.
- Cards must be easy to scan quickly.
- Primary action on each card: View or Open job.

Browse Job Card Layout

- Title at top, bold.
- Budget clearly visible.
- Urgency shown as a chip.
- Postcode district and approximate distance shown below.
- Do not expose exact address.
- Card spacing must be generous.

Screen 4 — Job Detail

- Show job title, description, budget, urgency, and area.
- Show poster-safe summary only; no exact address publicly.
- Main button for eligible users: Apply.
- If free worker limit is nearly reached, show remaining applications clearly.
- Optional AI helper content must be visually secondary.

Screen 5 — Post Job

- Short form, no overwhelming wall of inputs.
- Order: title, description, budget, postcode, urgency, optional preferred time.
- Primary action button fixed or easy to reach: Post job.
- If AI suggestions are shown, label them clearly as suggestions only.
- Use live preview only if it stays simple.

Screen 6 — My Jobs

- Split clearly between Posted jobs and Applied jobs.
- Each item should show status chip, title, budget, and next action.
- Posted job view should make it easy to open applicants.
- Applied job view should clearly show whether user is waiting, selected, cancelled, or completed.

Screen 7 — Applications Review

- Poster should see a simple list of applicants.
- Each applicant card should show display name, short note, basic trust indicators.
- Primary action: Select worker.
- No overly complex sorting or scoring in MVP.

Screen 8 — Messages

- Conversation list first, then chat view.
- Each conversation tied to one job.
- Chat should be text-only in MVP.
- Large readable bubbles and enough spacing.
- If conversation is archived because cancelled/completed, show a clear archived label.

Screen 9 — Profile

- Show display name, postcode, transport mode, bio/skills if present.
- Plan tier can be displayed here later.
- Keep editing simple and lightweight.
- Include logout and account actions.

Status Chip Style

- Use clear chips with strong contrast.
- Statuses: Open, Held, Confirm pending, In progress, Completed, Cancelled.
- The chip colour and label must be readable at a glance.
- Do not rely on colour alone; text label must always be visible.

Accessibility Rules

- Touch targets must be generous.
- Never put critical actions in tiny text links only.
- Do not hide important info in low-contrast muted text.
- Use clear spacing between rows, cards, and form groups.
- Design should remain comfortable for older users.

What the Built Product Must Feel Like

- Fast
- Simple
- Local
- Trustworthy
- Human
- Not intimidating

Developer Interpretation Rule

- If a UI choice makes the app feel more complex, more corporate, or more like a generic gig marketplace, do not use it.
- If a design decision improves clarity and confidence for normal everyday users, prefer it.
