

FEN Intro Animation — Clear Build Specification

This file replaces earlier vague animation notes. It defines the intro animation precisely so it can be built accurately. Use this as the source of truth for the opening animation.

1. Core creative goal

- The animation must show the brand forming naturally from a living vine, not simply appearing as a finished logo.
- The motion should feel organic, elegant, premium, and memorable.
- The final result must leave the user looking at the completed vine pin with the word FEN underneath.
- The flowers appear only after the vine has formed the pin shape.

2. Total timing

- Target total length: 2.4 to 3.0 seconds.
- Do not make it shorter than 2.2 seconds.
- Do not make it longer than 3.2 seconds.

3. Exact sequence

Phase	Timing	What must happen	Notes
A. Background	0.00–0.20s	Dark premium background visible immediately with soft light/glow background.	No flat/black background.
B. Vine growth	0.20–0.90s	A thick green vine grows upward from below centre screen.	Growth must feel natural, not like a line tool.
C. Pin formation	0.90–1.60s	The vine curves and wraps to form the location-pin silhouette with a loop/open centre.	Final shape must be a location pin, not a simple pointed bottom.
D. Flower bloom	1.60–1.95s	Small purple flowers bloom from a few points on the vine.	Flowers appear only after the pin shape is complete.
E. Text sequence	1.95–2.55s	F with Fast, then E with Earn, then N with Nearby.	Readable, brief, centred below the pin.
F. Resolve to FEN	2.55–2.85s	Fast, Earn, and Nearby fade away while the letters combine into FEN.	Final state FEN must be visible in the pin above and FEN below.
G. Final settle	2.85–3.00s	Very subtle final settle/glow pulse only.	No extra flourish or bounce.

4. Precise motion notes — Vine growth

- The vine begins off-screen or just below the lower centre edge.
- It grows upward as a single thick vine body.
- The growth tip leads the motion.
- The motion should slightly arc, not travel in a perfectly straight line.
- The growth must feel like a plant extending, not software drawing a stroke.

5. Precise motion notes — Pin formation

- As the vine continues upward, it curves around and forms the upper loop of the pin.
- The loop/open centre becomes visible during this phase.
- The lower section tightens naturally into a pointed tail.
- The final silhouette must still clearly read as a location pin.

6. Precise motion notes — Flowers

- Use only a small number of flowers: ideally 2 to 4.
- Flowers must emerge from the vine structure, not float separately.
- They should bloom gently using scale + opacity, not pop like stickers.
- Purple flower colour should match the established brand flower colour.

7. Precise motion notes — Text

- Display the letter F and the word Fast together.
- Then transition to E and Earn.
- Then transition to N and Nearby.
- These appear beneath the pin, centred, one after another.
- Do not use a typing cursor or terminal effect.

8. Resolve to final brand lockup

- After N / Nearby, the words Fast, Earn, and Nearby fade away.
- The letters F, E, and N remain and resolve together into the single word FEN.
- Final layout: vine pin centred above, FEN centred below.

9. Visual rules

- Use a dark rich background with depth; avoid dead plain black.
- The vine should look organic, slightly dimensional, and alive.
- The flowers add beauty and warmth, not clutter.
- The motion should feel premium and cinematic, not cartoonish.
- Keep the composition centred and uncluttered.

10. Do not do these

- Do not make the logo simply fade in fully formed.
- Do not show flowers before the pin shape is complete.
- Do not use bouncy mascot-style motion.
- Do not end on the words Fast Earn Nearby; end on FEN only.
